PROFESSIONAL SUMMARY

Senior QA Automation Engineer (SDET) and GenAI QA Lead with nearly 10 years of experience designing, developing, and leading end-to-end test automation solutions across retail technology, healthcare, blockchain, and enterprise software. Proven expertise in building scalable automation frameworks using Playwright (Python), Selenium (Java), and Appium, with hands-on experience implementing GenAI-powered QA agents to improve testing efficiency and software quality. Skilled in API automation, accessibility testing with Axe-core, GitHub Actions CI/CD, blockchain API validation, healthcare and POS device testing, and Agile/DevOps practices. Recognized for delivering high-impact quality engineering initiatives, including a Client Appreciation Award and three Internal Excellence Awards for technical leadership and innovation.

CORE COMPETENCIES

Test Automation Architecture • GenAI / AI-Augmented QA • Accessibility Testing (Axe-core / WCAG) • GitHub Actions • Ecommerce, SCM, WIP, Blockchain & Healthcare QA • Shift-Left Quality Strategy • API & Contract Testing • Cross-Functional Team Leadership (10+) Playwright (Python) • Selenium (Java) • Appium • REST Assured • Postman / Swagger • TestNG • Cucumber • Agile • GitHub Actions • Jenkins • Git • Jira • TestRail • MySQL • PostgreSQL

PROFESSIONAL EXPERIENCE

Software Quality Engineer

Aug 2023 – Present

Domino's Pizza Enterprises Limited | Kuala Lumpur, Malaysia (E-Commerce · Retail Tech [ANZ, APAC, EU])

- **Pioneered GenAI-powered QA agent infrastructure from zero** — built custom agents for test case generation, synthetic data creation, and exploratory workflows; reduced manual test authoring effort by ~40% per sprint.
- **Architected a robust Playwright (Python)** automation framework for UI and end-to-end testing, improving test reliability, reusability, and execution efficiency.
- **Implemented accessibility testing with Axe-core** — enforced WCAG 2.1 AA across European web properties and surfaced accessibility violations directly in CI as first-class defects.
- **Built and maintained GitHub Actions CI/CD pipelines** to trigger automated test suites on pull requests and release branches, accelerating developer feedback and reducing manual execution overhead.
- **Managed QA coordination and release quality for 12+ customer-facing applications platforms** across ANZ, APAC, and EU regions, ensuring consistent multi-region deployments and stable customer experience.
- **Established global Quality Systems documentation and compliance standards** and delivered executive-level QA reporting to senior program stakeholders across European markets.
- **Drove performance and operational quality improvements** by automating API testing and validation processes, reducing manual effort and improving test accuracy.

Senior Automation QA Engineer

Apr 2022 – Aug 2023

Solve.Care | Bangalore, India (Blockchain Healthcare Platform)

- **Built a Selenium (Java) + TestNG automation framework from the ground up**, integrating TestRail and Jira reporting to replace manual status tracking with real-time quality visibility for stakeholders.
- **Led requirement elicitation in product and build grooming sessions**, translating specifications into structured test plans, traceable acceptance criteria, and sprint-ready QA deliverables.
- **Automated functional and regression coverage across priority tickets**, improved suite reliability through targeted debugging, and accelerated pre-release validation cycles.
- **Delivered blockchain API contract testing and healthcare device interoperability validation** (BMI, heart rate, ECG), strengthening data integrity and release confidence for a live patient-facing platform.
- **Managed and mentored a cross-functional QA team of 10 across 3 locations**, directing Agile test execution, defect triage, and release readiness with engineering and business teams.
- **Presented automation demos and release-readiness reports before production deployments**, improving stakeholder alignment and enabling predictable, quality-driven go-live decisions.
- **Defined organization-wide automation strategy, QA standards, and tooling best practices**, strengthening Agile quality workflows and delivery consistency across concurrent sprints.
- **Improved test management maturity using TestRail and Jira**, standardizing traceability from requirements to execution results and accelerating defect lifecycle reporting.

Senior Test Engineer

Oct 2017 – Mar 2022

Quinta Systems Pvt. Ltd. | Bangalore, India (Enterprise Software & Client Services)

- **Architected a hybrid Selenium (Java) + TestNG + Appium automation framework from scratch** — delivered end-to-end web, Android, and iOS coverage across 5+ concurrent enterprise client projects, reducing regression cycle time by ~35%.
- **Delivered a high-complexity project engagement in compressed timelines** with full ownership of quality, validation, and post-launch sign-off; recognized with a Client Appreciation Award and with zero post-release critical defects.
- **Authored and owned test strategy artifacts** (test strategy, plans, scenarios, and test cases) from business and functional requirements, improving traceability and quality-focused execution across multiple projects.
- **Delivered full-stack QA across UI, API, and data layers** using Postman, Swagger, REST Assured, MySQL, and PostgreSQL, strengthening end-to-end validation before release.
- **Integrated Jenkins and Git-driven automation execution pipelines**, standardizing build-level test reporting, logging, and release-quality visibility.
- **Served as Scrum Master for QA delivery**, facilitating sprint ceremonies, backlog refinement, and cross-team coordination across SDLC/STLC workflows.
- **Drove defect lifecycle quality with development teams** through root cause analysis, requirement and design inconsistency resolution, and severity-based prioritization.
- **Led training for in-house and offshore QA engineers** on automation frameworks, testing standards, and execution practices, improving onboarding speed and consistency across distributed teams.
- **Supported client-facing delivery through project demos and release walkthroughs**, translating technical test outcomes into clear business-facing quality updates for stakeholders.

Application Support Engineer

Feb 2017 – Sep 2017

Pole To Win International | Bangalore, India (Rockstar Games)

- **Executed structured manual testing across multiple gaming platforms**, validating gameplay, UI behavior, and platform compatibility to support launch-ready quality standards.
- **Performed regression, smoke, and exploratory test cycles under tight release timelines**, identifying critical pre-launch defects and accelerating severity-based triage.
- **Authored clear, reproducible defect reports with detailed evidence**, improving collaboration with developers and reducing issue turnaround time.
- **Designed and maintained TestRail test repositories**, mapping test coverage to functional requirements and improving traceability across concurrent game titles.
- **Standardized manual test case design and execution practices** in a product-driven game testing environment, reducing regression coverage gaps and increasing release confidence.

SKILLS & TECHNOLOGY

Automation: Playwright (Python), Selenium (Java), Appium (Android/iOS), REST Assured, TestNG, Cucumber (BDD), Maven

Accessibility: Axe-core, WCAG 2.1 AA Compliance, Playwright-Axe Integration, Accessibility Defect Tracking in CI Pipelines

AI & GenAI: Custom GenAI QA Agent, AI-Driven Automation, Prompt Engineering for QA

API & Integration: Postman, Swagger, REST Automation, Blockchain API / Smart Contract Testing, API Contract Testing

CI/CD & DevOps: GitHub Actions, Jenkins, Git, CI/CD Pipeline Integration, Build Pipeline Management, Deployment Oversight

Test Management: Jira, TestRail, Test Strategy & Planning, Shift-Left Testing, SDLC / STLC, Defect Management, Risk Assessment

Databases: MySQL, PostgreSQL, Data Validation, Front-End / Back-End Integrity Testing

Domains: Food-Tech (Global QA), Blockchain Healthcare, Medical Device Integration, Enterprise Software, Game Testing

AWARDS & RECOGNITION

- **Best Sprinter (2023):** Recognised for accelerating automation suite delivery within a critical release window.
- **Best Employee (2021):** Awarded for leading the QA function end-to-end and pioneering blockchain testing strategy.
- **Client Appreciation (2019):** Recognised by Siemens for critical-deadline delivery with full deployment pipeline ownership.

EDUCATION

Bachelor of Engineering — Computer Science Engineering

Visvesvaraya Technological University, India

CERTIFICATIONS

ISTQB Foundation Level — International Software Testing Qualifications Board / UKITB

AI Fundamentals Certification — Certified foundation in AI principles, tools, and applied GenAI workflows

Spring Boot & Microservices — Edureka Certificate of Completion
